

Watch live & review recorded video anywhere

VT Live gives you access to streaming footage from single or multiple vehicles, and lets you review and download tagged events instantly - saving you time and money.

Watch Live streaming video

Review and download recorded footage as it happens - no need to wait for the vehicle

Protect your fleet

Defend against claims and incidents with instant triggers indexing footage from vehicles

Real-Time responsive action

Save time and money by monitoring and supervising your fleet efficiently

VT Live streams video footage from vehicle mounted cameras to any location using wireless remote connectivity.

Footage can be watched 'as it happens', reviewed later and can be downloaded for external use. Video can also be bookmarked by gps location and event triggers set up onto the system - such as reversing, engine ignition or pressing a panic button.

VT Live integrates with market leading telematics management systems to give analysis of your fleet with immediate video evidence. VT Live is designed to monitor performance, identify areas where training is required, and look for ways to improve vehicle safety with your fleet.

The state-of-the-art software features GPS integration, tagging footage with exact location data, and allows footage to be searched for by location.

"the complete solution for vehicle recording - watch live, review recorded or download footage from anywhere"

The system can protect against fraudulent claims or incidents and will bookmark events for review, massively reducing the time needed investigating.

Thanks to the 'always recording' function of VT Live, situations which once had no element of control can be managed, such as staff abuse, vehicle theft and vandalism, managing lone workers and fraudulent claims.

This means any incident can be resolved quickly, efficiently and more successfully.

Designed to work with

Integrate radar system to tag reversing events for later review and download

Introduce Ident RFID system to control front or rear of vehicle, linking directly to recording system
