

## Banksman Plus inc. VT Light Boards Technical Specification

### Overview

**Banksman Plus** incorporating LED light board    Caution  
Workers At The Rear

All the benefits of our award-winning '**Banksman Radar**' with the additional safety feature of front and rearward facing high intensity LED warning light boards to alert other motorists that operatives are working in the vicinity of the vehicle.

The forward facing light board is positioned discreetly behind the windscreen of the vehicle's cab and the external rearward facing unit sits at high level on the bin-lift, hopper or tailgate. The external light board is waterproofed to IP67.

It is becoming more apparent that other road users have a blatant disregard to those people responsible for collecting our household waste and recycling.

Flashing amber beacons and hi-visibility clothing are now so common they tend to be ignored. However, when a worded warning message displays "SLOW DOWN" when you enter a built-up area for example, it instantly attracts your attention and the general reaction is to remove your foot from the accelerator and look at your speedometer!

**The LED Light boards are available in the following warnings:**

- Caution workers at the rear
- Danger vehicle reversing
- Stop vehicle reversing
- Caution turning left
- Do not overtake
- Pass with caution
- Caution wideload
- Enter / Do not enter
- Caution → (or) ←

## Banksman Plus inc. VT Light Boards Technical Specification
